

shared ontology

bounded study → representation + environment → AI method roles
evidence → architectural claim → accountable decision

illustrative operating regimes, not a maturity scale

fast software

feedback: fast
rollback: local
review: tests

workload + DSE

feedback: staged
rollback: mixed
review: coverage

co-design + fleet

feedback: noisy
rollback: coupled
review: telemetry

RTL / physical

feedback: slow
rollback: costly
review: signoff

higher consequence and lower reversibility require stronger evidence

decision consequence and rollback cost often rise; delegated authority narrows
