

shared ontology

task -> representation -> environment -> method -> evidence -> human decision

fast software

feedback: fast
commitment: low
reject: tests

workload + DSE

feedback: staged
commitment: mid
reject: coverage

co-design + fleet

feedback: noisy
commitment: high
reject: telemetry

RTL / physical

feedback: slow
commitment: very high
reject: signoff

higher commitment means more critique, evidence, and approval

feedback latency and evidence burden increase; acceptable autonomy narrows
