

## shared ontology

task → representation → environment → method → evidence → human decision

### fast software

feedback: fast  
commitment: low  
reject: tests

### workload + DSE

feedback: staged  
commitment: mid  
reject: coverage

### co-design + fleet

feedback: noisy  
commitment: high  
reject: telemetry

### RTL / physical

feedback: slow  
commitment: very high  
reject: signoff

higher commitment means more critique, evidence, and approval

—————→  
feedback latency and evidence burden increase; acceptable autonomy narrows
