

A. General foundation-model pattern

Heterogeneous inputs are embedded into a central foundation and adapted to many downstream tasks.

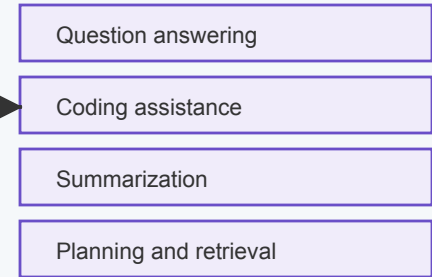

Inputs

Foundation model

shared learned substrate

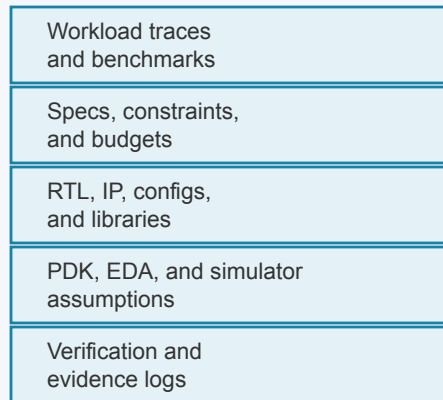

Downstream use cases

B. Bounded AI-assisted architecture study

The center connects architectural representations to tools and experiments under evidence and architect judgment.

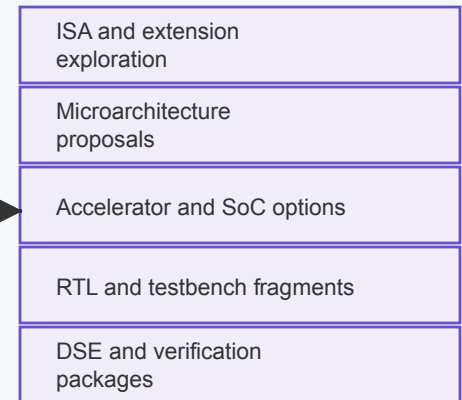

Architecture inputs

AI-assisted architecture study

representations + tools
experiments + evidence
architect judgment

Study outputs

AI-assisted studies connect representations, tools, experiments, evidence, and architectural judgment.
