

broader claims require stronger evidence

higher

**Level 5**

**Commitment-boundary awareness**

What it may recommend, what must escalate, and why.

**Level 4**

**Evidence and calibration awareness**

Tracks uncertainty, proxy mismatch, and fidelity;  
records rejected alternatives.

**Level 3**

**Tool and environment awareness**

Compiles, runs, profiles, simulates, and interprets tool failures.

**Level 2**

**Performance-model awareness**

Reasons about locality, bandwidth, parallelism, pipelines, and data movement.

**Level 1**

**Constraint awareness**

Uses power, area, memory, latency, precision, reliability, and process limits.

**Level 0**

**Vocabulary awareness**

Names ISA, cache, vector, accelerator, SoC, compiler, and EDA concepts.

lower

**Assessment: what can it change, what feedback supports it, and what can reject it?**
